

Replace the Abstract with the following:

A memory card [[110]] performs decryption processing to extract a session key [[Ks]] from data applied from a server to a data bus [[BS3]] over a cellular phone network. An encryption processing unit [[1406]] encrypts a public encryption key ~~K<sub>Peard</sub>(1)~~ of memory card [[110]] based on a session key [[Ks]], and applies the same to the server via data bus [[BS3]]. A register [[1500]] receives and stores data such as a decrypted license ID and a user ID from the server, and a memory [[1412]] receives and stores encrypted content data ~~{De}K<sub>e</sub>~~ applied from a data bus [[BS3]] and encrypted with a license key [[Kc]].
